

Downflow module

Why downflow module?

- To ensure clean area after the autoclave
- Possibility of storing autoclaved goods in a clean and safe area
 - For a clean process, f.ex. filling bottles

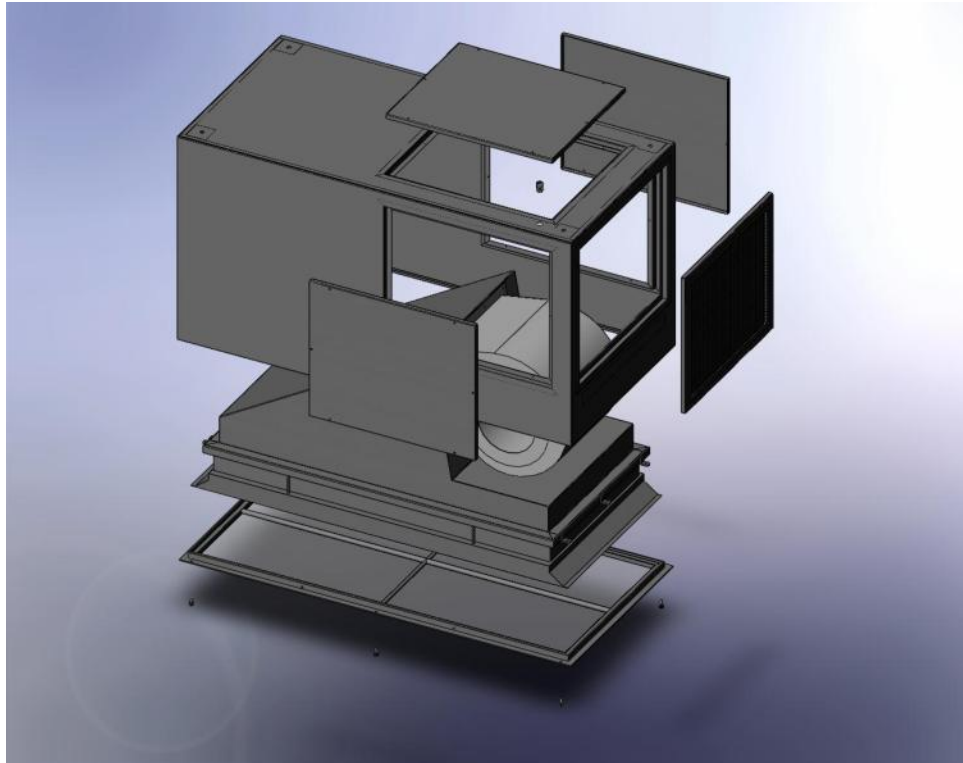

Downflow module

Presentation of our solution

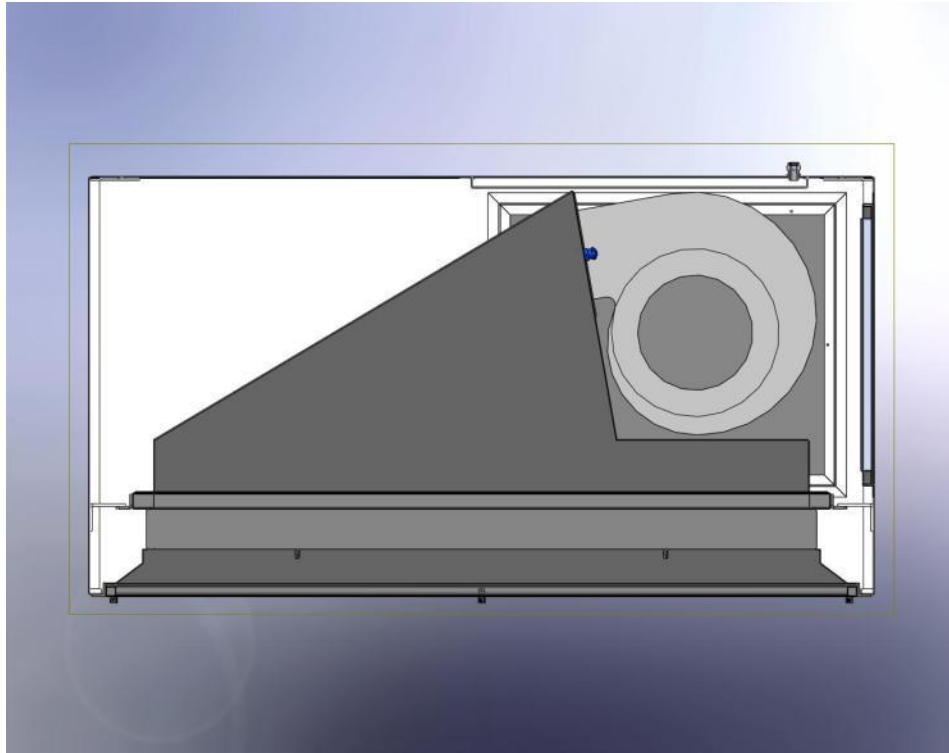

- We have developed a flow module to ensure the clean areas after the autoclave
- It is designed as a "LEGO" module. The width is half the length. In this way we can build the areas, which the customers require without ending up in expensive special projects

Downflow module

- Designed to be simple and cheap but still very reliable

Downflow module

- Designed with negative pressure chamber
